FOREIGN AGRICULTURAL TRADE

OF THE UNITED STATES

Digest

Commercial and Food-for-Peace Exports of U.S. Farm Products Equally Share Decline in Fiscal Year 1969 (see page 6). A decline, equally divided between commercial and Foodfor-Peace exports, brought U.S. agricultural exports to \$5.7 billion, nearly \$0.6 billion less than a year earlier. A marked drop in foreign currency sales was partly offset by a \$0.1 billion increase in long-term credit sales and by larger donations. Most of the sharp drop in shipments of wheat was in food-aid shipments, especially to India and Pakistan. Dollar sales of feed grains, cotton, and rice were substantially lower. Commercial exports of soybeans, oil cake and meal, flaxseed, pork, and hides made sizable gains. Smaller increases were recorded for tobacco, fruits, and vegetables.

Most of the \$400 million drop in shipments to Asia was in food-aid exports. Smaller dollar sales to Europe accounted for \$226 million of the total decline. Canada recorded a \$100 million rise, mostly in transshipments to other countries. Shipments to Latin America and Africa were lower, but those to Oceania showed little change.

There was increased foreign competition in wheat, feed grains, oilseeds, cotton, tobacco, and other products. The dock strike at Atlantic and Gulf ports resulted in a substantial loss in U.S. exports of farm products.

Italian Corn Imports: A Statistical Correction and Its Trend Implications (see page 36). In 1967, Italy imported 5,244,320 metric tons of corn valued \$336,886,000. These revised figures are up 1,854,837 tons (55 percent) and \$115,054,000 (52 percent) from the originally published figures. The revisions markedly affect the trend of Italy's corn and total agricultural imports. Revised data on Italian corn imports from the United States are approximately double the original data.

Exports as Share of Production (see page 41). U.S. exports of agricultural products in 1968/69, at \$5,740 million, were equivalent to 13 percent of the \$44,386 million of cash receipts from farm marketings in 1968. This was down from 15 percent a year earlier: Cash receipts increased 4 percent while exports declined 9 percent. The export market

accounted for over five-sixths of the production of dried peas; three-fifths of the rice; two-fifths of the soybeans, tobacco, hides, tallow, and hops; one-third of the wheat and flaxseed; and a fourth of the prunes, raisins, cotton, nonfat dry milk, and dry whole milk.

* * * * *

U.S. Agricultural Exports to 50 Largest Markets, Fiscal Years 1965-69 (see page 44). U.S. agricultural exports, at \$5.7 billion, moved to over 150 countries in 1968/69. Best markets in the past several years have been Japan and the major industrial countries of Western Europe. Agricultural exports to Japan averaged \$847 million in 1965-69, reaching a high of \$939 million in 1966/67. Although India and Pakistan showed similar increases in receipts of U.S. agricultural products, a sharp increase in production of wheat and rice in these countries in 1967/68 sharply reduced their import requirements. As a result, India's receipts of agricultural products from the United States declined more than 50 percent.

* * * * *

<u>Selected Price Series of International Significance (see page 62)</u>. Wheat prices continued to sag in September. The effect of lower buyers' prices for U.S. wheat was not yet reflected in c.i.f. U.K. quotations. The soybean price, c.i.f. U.K., indicated good demand.

* * * * *

U.S. Agricultural Exports, July-September 1969 (see page 66). U.S. agricultural exports totaled \$1,410 million in July-September, about 1 percent below a year earlier. The decline resulted primarily from lower exports of cotton, oilseeds and products, and tobacco. Exports of animals and animal products, fruits and vegetables, and grains and preparations increased.

Exports of farm products to the European Community totaled \$282 million in July-September, down 16 percent. Sales of variable-levy commodities dropped 21 percent to \$113 million, while commodities not subject to the EC's variable import levies declined 12 percent to \$168 million.

* * * * *

U.S. Agricultural Imports, July-September 1969 (see page 71). In September, U.S. agricultural imports were \$399 million, bringing the July-September total to \$1,241 million. For September 1968, agricultural imports were \$460 million, with the cumulative July-September 1968 amounting to \$1,341 million. Supplementary agricultural imports in July-September were 1 percent below the corresponding months last year. Complementary products fell 17 percent in value, primarily due to smaller green coffee imports.

Table 1.--U.S. exports: Value of total and agricultural exports, including specified Government-financed programs $\underline{1}/$ and commercial (dollar) sales $\underline{2}/$ by selected commodities and commodity groups, averages 1955-59, 1960-64, and 1965-69; annual 1968-69 and July-September 1969/70

^{1/} Includes exports under Public Law 480 programs (sales for foreign currency, long-term dollar and convertible local currency credit sales, barter for strategic materials, and donations) and under AID programs. 2/ Commercial sales (exports outside Government-financed programs) include in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies, which benefit the U.S. balance of payments and relie primarily upon authority other than P.L. 480; extension of credit and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash or in kind. 3/ Commodity group totals for feed grains, oilseeds and products, and animals and products include for years noted, in addition to the value reported by the Bureau of the Census, the estimated value of certain commodities donated through voluntary relief agencies, which are included by census in "Other food for relief and charity." 4/ Preliminary data.

SPECIAL in this issue

COMMERCIAL AND FOOD-FOR-PEACE EXPORTS OF U.S. FARM PRODUCTS EQUALLY SHARE DECLINE IN FISCAL YEAR 1969

Eleanor N. /DeBlois 1/

U.S. exports of farm products totaled \$5.7 billion in 1968/69, down nearly \$0.6 billion from 1967/68 and \$1.0 billion less than the peak year of 1966/67. The decline from 1967/68 was equally divided between commercial and food-aid exports. A drop in sales for foreign currency and a jump in long-term credit sales marked progress in the trade shift from foreign currency sales to long-term dollar and convertible local currency credits as directed by Congress in 1966 (table 2).

A sharp drop in Government-financed exports accounted for three-fifths of the \$384 million decline in shipments of wheat and flour. Substantial reductions in feed grain, cotton, and rice exports came mainly from smaller dollar exports. A rise in commercial exports of soybeans, flaxseed, and oil cake and meal brought oilseeds and products to a level 3 percent above the preceding year. This group made up a fourth of all dollar sales. A spectacular rise in exports of pork and larger shipments of hides and skins brought about a 15-percent increase in shipments of animals and products, except dairy products. Larger food-aid shipments, especially donations under Title II, P.L. 480, accounted for most of the nearly 30-percent rise in exports of dairy products. Small gains were also recorded for tobacco and fruits, vegetables, and preparations (table 3).

The sizable drop in food-aid accounted for two-thirds of the nearly \$400 million reduction in shipments to Asia. Smaller dollar sales to Europe made up \$226 million of the total export decline. Shipments to Africa and Latin America were lower. Exports to Canada were up \$100 million, with about 70 percent of the rise reflecting transshipments to other countries through St. Lawrence ports. Exports to Oceania were little changed.

A number of situations and events made 1968/69 a difficult year for foreign marketing of U.S. farm products. Large world wheat supplies, well distributed among exporting and importing countries, reduced the demand for U.S. wheat, particularly via concessional sales to India and Pakistan, which had record harvests for 2 consecutive years. Europe's large supplies of low-quality wheat for animal feed reduced its demand for U.S. feed grains. Cheaper substitutes are being used for feed grains in animal feeds in the EC, especially for imported grains subject to variable levies. The trend toward high support prices and high trade walls, especially in the EC, is posing difficult problems for U.S. agricultural trade. U.S. vegetable oils met strong competition in the world market from foreign soybean oil originating from U.S. beans and from other vegetable oils, butter, and other animal fats. There has also been increased foreign competition for U.S. cotton, tobacco, fruits, poultry, lard, and other products.

Two events costly to U.S. agricultural exports took place during the year. The dock strike at Atlantic and Gulf ports is estimated to have caused the loss of over \$200 million in U.S. exports of farm products. The temporary stoppage in U.S. exports of wheat to Japan, the leading dollar market for U.S. wheat, because of a quality problem in some wheat exported from the Pacific Northwest, reduced U.S. wheat exports to that country. Japan is also pursuing a policy of diversifying its sources of supply for agricultural products as part of its aid program to developing countries.

The categories "Government-financed programs" and "Commercial exports" or "Exports outside Government-financed programs" have been revised beginning with reports for 1968/69 quarters because of the barter export reclassification. The category "Government-financed programs" for 1968/69 includes shipments under Mutual Security (AID) programs for July-December 1968 only. Revisions in the reporting system delayed the report for January-June 1969.

Before calendar year 1963, the emphasis in the barter program was on the barter of agricultural commodities for strategic and other materials for Government stockpiling needs. In 1963, USDA began using the program to offset some of the dollar outflow for foreign purchases by U.S. agencies with an inflow of dollars for agricultural commodities. By then, most of the Government's stockpiling needs had been met, CCC commodity inventories were becoming substantially less burdensome, and the U.S. balance-of-payments problem was a matter of continuing concern.

Overseas procurements for U.S. agencies involving barter of agricultural commodities are authorized under the CCC Charter Act, largely using private stocks to fulfill barter contracts. These transactions are essentially equivalent to dollar sales since they offset the dollar outgo that would otherwise impair the U.S. balance of payments.

Because of balance-of-payments effects, and with the approval of the USDA Statistical Review Board, it was decided to classify as "Government-financed" barter exports under contracts for strategic materials and as "Commercial (dollar) exports" barter shipments under overseas supply-type contracts.

Commodity Developments

Grains.--U.S. exports of wheat grain declined to \$788 million (471 million bushels), the lowest since 1959/60. Large and well distributed world stocks held world wheat trade to the lowest level since 1962/63. The strike at Atlantic and Gulf ports last winter was a factor also. U.S. shipments to Japan were reduced to 67 million bushels, from 82 million bushels in 1967/68, largely because of the quality issue. During the year, U.S. hard winter wheat was especially noncompetitive in Western Europe due to wheat of similar quality from competing sources and the pricing provisions of the International Grains Arrangement. A large part of the drop in P.L. 480 shipments was to India and Pakistan, which needed less because of bumper wheat crops. An increase of over a third in Food-for-Peace shipments brought U.S. flour exports to \$106 million from \$85 million in 1967/68, Ceylon, Indonesia, and South Vietnam received large quantities of wheat flour under Title I, P.L. 480.

U.S. exports of feed grains in 1968/69 declined 23 percent to \$774 million, the smallest total since 1962/63. More than three-fourths of the drop from 1967/68 was in dollar exports. Reduced demand in Europe, the dock strike, and the large quantity of wheat available for feed at prices competitive with corn and other feed grains reduced U.S. feed grain exports. Shipments to the EC were off over 30 percent and exports to Japan, the United Kingdom, and Spain were down considerably. The \$51 million decline in P.L. 480 exports was mostly in grain sorghums to India, which in 1967/68 imported large quantities to supplement wheat in meeting its food grain requirements.

A reduction in dollar exports in the face of mounting world supplies brought U.S. exports of milled rice to \$316 million, second only to the record \$337 million a year earlier. The use of high-yielding varieties has resulted in large rice crops, especially in some Asian countries. Asia accounted for 70 percent of U.S. milled rice exports, but had the largest reduction, 10 percent in 1968/69. The Republic of Korea, which suffered a serious drought in 1968, was the largest single market for U.S. rice, partly for dollars and partly under convertible local currency credits. Indonesia received a considerably larger quantity than the previous year under longterm credits. South Vietnam and India received rice for local currency, but shipments to South Vietnam were only 40 percent of the 1967/68 volume. Dollar exports to Hong Kong were only 7 percent of 1967/68's, but those to Nansei Islands were up nearly 20 percent. Larger volumes moved commercially to Europe, particularly to West Germany and the Netherlands. The United Kingdom took less than a year earlier. Shipments to Canada were up nearly 10 percent. Africa took 3 percent less; there were reductions to the Republic of South Africa, Saudi Arabia, and Liberia, but larger volumes to Ghana and Sierre Leone.

Cotton.--U.S. exports of cotton amounted to \$329 million (2,811,000 bales) in 1968/69, the smallest volume since 1955/56 and the lowest value since 1944/45. U.S. prices were above prices of foreign-produced cotton of similar quality early in the season, the United States did not have the wide selection of cotton qualities available during most previous years, foreign production was at record levels, and foreign demand was down largely due to the increased use of man-made fibers. During the latter part of the year as prices fell, importers had sufficient stocks to delay buying in anticipation of still further price reductions.

Over 70 percent of U.S. cotton went to Asia, including reduced quantities through commercial channels to Japan, Hong Kong, and Thailand. Largest Asiatic cotton markets in exchange for local currency were the Republics of Korea and China, both of which also purchased cotton for dollars. Shipments to South Vietnam for local currency were double 1967/68's volume. Indonesia received a sizable quantity of raw cotton and cotton yarn under the long-term credit program. Europe took over a tifth of U.S. cotton, although shipments to most European countries were considerably reduced. Shipments to the EC were cut more than half, with sharpest declines to Italy and West Germany. Exports to Poland were up about 40 percent and exports to Yugo-slavia held up well.

Tobacco, unmanufactured.—Increased commercial sales brought U.S. exports of unmanufactured tobacco to \$507 million from \$494 million a year earlier. U.N. sanctions against Rhodesian tobacco, the improved quality of recent U.S. flue-cured crops, and the export-payment program continued to advance foreign sales. Expanded production in some foreign countries, encouraged by the U.N. sanctions, brought increased competition with U.S. tobacco. Europe purchased over 70 percent of the U.S. export total. The United Kingdom, our leading tobacco market, took nearly 20 percent less than in 1967/68. Purchases by EC countries were up 17 percent. Asia took a fifth of U.S. foreign sales of tobacco, including larger dollar sales to Japan, Thailand, and Malaysia. A larger quantity moved to South Vietnam for local currency. The Philippines took more U.S. tobacco partly for dollars and partly under long-term dollar credits. Shipments to the Republic of China, partly for local currency, were less than a year earlier. Shipments to Australia were up over a third.

Oilseeds and products.—The continued rise in U.S. exports of soybeans and oil cake and meal brought exports in this commodity group to \$1,239 million, 3 percent higher than in 1967/68. U.S. exports of soybeans reached 291 million bushels in 1968/69, 10 percent higher than a year earlier. Lower prices, which stimulated exports, held the value to \$785 million, up 5 percent. Leading dollar markets were the EC, which took over a third of the total, and Japan, the largest single market, with a fourth. Other important markets were Canada (including transshipments to other countries), Spain, the Republic of China, Denmark, and Israel.

Exports of oil cake and meal climbed from 1.6 million short tons in 1962/63 to 3.2 million tons in 1968/69. Soybean oil cake and meal made up more than 90 percent of the total. Demand continued strong in Western Europe, which took three-fourths of our oil cake and meal exports. Principal European markets included West Germany, the Netherlands, France, Italy, Belgium, Yugoslavia, and Poland. Canada took nearly 10 percent of the total. Principal markets in Asia were Japan and the Philippines. Australia was also important.

Exports of flaxseed nearly doubled 1967/68's total, amounting to \$30 million, highest since 1955/56. Plentiful U.S. supplies and smaller foreign availabilities for export, principally in Argentina, boosted U.S. exports. Major European markets, which took nearly 90 percent of the total, included West Germany, the Netherlands, Belgium, Spain, and Czechoslovakia. Canada took over 10 percent.

Lower prices brought U.S. exports of cottonseed oil to 118 million pounds, more than double 1967/68's depressed level. They were still much less than exports during 1954-66, when they ranged from over 300 million to nearly 700 million pounds. Shipments of soybean oil, over 80 percent of which were under Food-for-Peace programs, were lower than a year earlier. India, the largest Title I recipient, had a large peanut crop and needed less soybean oil than a year earlier. Program shipments to Pakistan were also lower.

Dairy products.--U.S. exports of dairy products rose nearly 30 percent to \$175 million from a year earlier. Donations of nonfat dry milk, butter, butteroil, ghee, and fortified blended food products were considerably higher. The emphasis in donation programs is being placed more and more on supplying foods high in protein and fortified with minerals and vitamins to provide nutritional requirements not normally available, especially to children in developing countries. Considerably more evaporated milk moved to South Vietnam in exchange for local currency. Commercial exports of dry whole milk and cream were sizably higher. Dollar sales of nonfat dry milk were stimulated by sales from Government-owned stocks at reduced prices for restricted use abroad, mainly for school lunch programs.

Animals and products, except dairy products.—Exports in this category, nearly all dollar sales, climbed \$77 million to \$586 million from a year earlier. Shipments of meats and preparations were up over \$50 million with pork shipments contributing most to the increase. Much of the gain in exports of fresh, chilled, or frozen pork was due to large increases in purchases by Japan and Canada. Japan liberalized imports because supply could not keep pace with increasing demand, and prices rose. Canada had a smaller supply in 1968/69. Exports of hides and skins came closer to the high levels of 1965/66 and 1966/67 after declining sharply in 1967/68. U.S. slaughter increased, prices rose, and foreign production declined. Shipments of fats, oils, and greases were off 4 percent, with most of the decline in inedible tallow. Increased production of animal fats in major foreign outlets, plentiful world supplies of vegetable oils, and the trend toward greater use of detergents lessened demand for U.S. animal fats.

Fruits and vegetables and preparations.—Small gains in shipments of canned fruit, fruit juices, and frozen fruit brought U.S. exports of fruits and preparations to \$291 million from \$286 million in 1967/68. Smaller shipments of apples and pears offset gains in citrus fruits, berries, and grapes and brought about a \$2 million decline in fresh fruits. Plentiful supplies from the United States met stronger competition from increased production both in traditional exporting and importing countries.

U.S. exports of vegetables and preparations amounted to \$170 million, little changed from a year earlier. Gains in shipments of dried beans and peas were nearly offset by a decline in fresh vegetables, especially onions and potatoes. In 1962/63, canned vegetables totaled \$32 million with canned asparagus alone amounting to \$14 million.

Since then canned vegetable exports have dropped each year, reaching \$20 million in 1967/68 and 1968/69. Canned asparagus contributed most to the decline, totaling only \$4 million in the past 2 years. High labor costs and slow and expensive mechanization are holding down U.S. production of vegetables for export. Canned asparagus is meeting increased competition from foreign sources. Exports of fruits and vegetables were commercial sales for dollars, except donations of dried beans amounting to \$0.6 million.

Exports under Supply-type Contracts for U.S. Agencies and Credit Sales Programs

"Commercial exports" or "Exports outside Government-financed programs" include shipments under barter contracts involving overseas procurement for U.S. agencies. Exports under supply-type barter contracts totaled \$265 million in 1968/69 compared with \$296 million a year earlier. Shipments under credit sales programs amounted to \$167 million down from \$211 million in 1967/68 (tables 4, 5, 6, and 7).

Barter for overseas procurement for U.S. agencies.—Shipments of U.S. farm products for U.S. agency needs abroad dropped 10 percent to \$265 million in 1968/69. These shipments made up over 99 percent of total barter shipments, 1 percent higher than in 1967/68. Since placing barter program emphasis on supplying goods and services for U.S. agencies, this type of barter has become a progressively larger proportion of total barter exports. Most of the reduction from 1967/68 was in wheat and cotton. Shipments of corn and tobacco were higher. About a third of the total went to Europe, including 70 percent of the tobacco and 45 percent of the corn. Asia took 37 percent of the total, including over 80 percent of the cotton, nearly half of the wheat, and over a third of the corn. About a fourth was shipped to Latin America, including over half of the wheat. Africa took 5 percent of the total and a small quantity went to Oceania.

Due to the sharp drop in U.S. cotton exports, the USDA in July 1969 announced additions to the list of countries eligible to receive cotton under the barter program. This action is intended to stimulate U.S. cotton sales abroad, thereby improving our balance-of-payments position.

Exports under credit sales programs.—Purchases under the CCC credit sales program reached a record \$339 million in 1966/67, then dropped to \$141 million the following year, and to \$116 million in 1968/69. Substantial declines in wheat and corn in 1968/69 were partly offset by sizable gains in rice. Cotton remained at nearly the same level, accounting for nearly two-fifths of total exports under the program. Poland, the Republic of Korea, Japan, and Yugoslavia were the leading purchasers of cotton. Most of the rice went to the Republics of South Korea and South Africa. Important markets for wheat included the Republic of Korea and Pakistan. West Germany, Ireland, and Norway took all of the tobacco, and all the corn went to Greece.

Less cotton to Japan was largely responsible for the \$20 million drop in exports under Export-Import Bank loans or guarantees to \$51 million. All of the corn under this program went to the Republic of Korea and the cattle and chickens to Mexico.

Government Program Developments

Exports under Food-for-Peace programs amounted to \$1.0 billion in 1968/69, \$285 million less than a year earlier. The \$386 million reduction in sales for foreign currency indicates further success in phasing out local currency sales and selling agricultural commodities on long-term credit terms only. The reduction in foreign currency sales was partly offset by a rise of over \$100 million in long-term credit sales for dollars and convertible local currency. Donations under Government-to-government arrangements and through voluntary relief agencies were higher. Barter shipments for strategic

 $[\]underline{1}$ /Credits for relatively short periods repayable in dollars plus interest (covering the financing costs of the lending agency).

3/ Purchases during the period.

 $[\]underline{2}/\text{Includes}$ disbursements by the Export-Import Bank and disbursements by U.S. commercial banks under Export-Import Bank medium-term guarantees against political and/or financial risk.

materials continued downward. Shipments under AID programs include only those for July-December 1968; a revision of the reporting system delayed the report for January-June 1969 (tables 8, 9, 10, and 11).

Sales for local currency and dollar and convertible local currency credit sales.— Exports authorized by Title I, P.L. 480, amounted to \$748 million in 1968/69, down from \$1,029 million a year earlier. Marking progress in the shift from local currency, exports under this program dropped to \$337 million from \$723 million in 1967/68. Sales under long-term credit agreements rose over \$100 million to \$411 million.

Three-fifths of the decline in exports for local currency was in wheat grain. Shipments of wheat under long-term credits were off 16 percent. Reflecting bumper wheat crops, India took nearly 75 million bushels of wheat under Title I in 1968/69, compared with approximately 200 million a year earlier. Shipments to Pakistan were reduced to nearly 15 million bushels from over 70 million. India was still the major recipient of wheat under Title I, followed by the Republic of Korea, Brazil, Pakistan, and Turkey. The wheat and tallow going to Turkey in January-June 1969 marked the first Title I shipments to this country since 1965/66.

Considerably larger volumes of rice to Indonesia and the Republic of Korea under long-term credits were partially offset by a reduction in rice to South Vietnam for local currency. Shipments of grain sorghums under Title I were about a third of last year's total because India, which took \$48 million worth in 1967/68 to meet its food grain requirements, took less than \$5 million in 1968/69. Title I shipments of cotton were off 5 percent from 1967/68 with a reduction in local currency sales nearly made up for by a doubling in long-term credit shipments of raw cotton and cotton yarn. The Republics of Korea and China were the principal destinations for cotton for local currency. Indonesia received over \$14 million of raw cotton and \$13 million of cotton yarn under the long-term credit sales program. Soybean oil shipments under Title I were reduced by more than a fourth because of a sizable reduction in shipments to India and Pakistan for local currency only partially offset by larger exports under long-term credits. Shipments of tobacco, including some cigarettes and smoking tobacco, were slightly higher. Larger quantities of wheat flour moved to South Vietnam for local currency and principally to Ceylon and Indonesia under long-term credits.

Foreign donations.—An increase in Government-to-government donations contributed most to the \$13 million increase in donations authorized by Title II to \$265 million in 1968/69. The inclusion of larger quantities of nonfat dry milk and fortified blended food products marks the increased emphasis on combating malnutrition in donations programs. More than 50 million children at present benefit from food donated for school lunch and maternal-child feeding programs in more than 100 countries. Recipient countries increase their contributions yearly and eventually continue the programs without U.S. help. To alleviate the causes which lead to the need of food assistance, emphasis is being increasingly directed into community and other self-help projects. The United States continues to assist foreign governments in disaster and refugee relief. Voluntary agencies provide on-the-spot assistance from existing P.L. 480 stocks.

The U.S. Government, under Title II authority, contributes commodities to the World Food Program, established in 1962 by the United Nations and the Food and Agriculture Organization. The United States also makes its contribution under the Food Aid Convention of the International Grains Arrangement under the authority of Title II.

In addition to increased donations of milk and blended-food products, larger quantities of butter and butter products, and wheat, but less soybean oil moved under donations Programs than a year earlier.

agaricultural exports outside specified Government programs" (sales for dollars) include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies; (2) extension of credit and credit 1/ Wheat and wheat flour. 8/ The excess of the Government program portion over total agricultural exports may be attributed to lags in reporting or to difquantity shown as foreign donations through voluntary relief agencies. Relief shipments of these commodities were not separately reported by the Bureau of ferences in classification procedures. 9/ Includes other whear cereal and rolled wheat for relief. 10/ The quantity shown for total agricultural exports of grain sorghums; oatmeal, groats, and rolled oats; and infants' and dietetic foods includes the quantity reported by the Bureau of the Census, plus the amended by P.L. 89-808. 3/ Authorized by Title II, P.L. 480, as amended by P.L. 89-808. 4/ Authorized by Sec. 303, Title III, P.L. 480, and other legislation. 5/ Expenditures under commodity (non-project) programs, project programs, and economic development loans, authorized by P.L. 87-195. 6/ "Total guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash. 1/ Authorized by Title I, P.L. 480. 2/ Shipments under dollar credit sales agreements signed through Dec. 31, 1966, authorized by Title IV, P.L. 480. Shipments under dollar credit and convertible foreign currency credit sales agreements signed from Jan. 1, 1967, authorized by Title I, P.L. 480, as the Census. $1\underline{1}/Q$ uantity estimated. $1\underline{2}/Q$ uantity not available. $1\underline{3}/B$ Blended food products (corn-soya-milk). The largest recipients of commodities under Government-to-government arrangements were the Republic of Korea, South Vietnam, Nigeria, UNRWA -- for the relief of Palestinian refugees -- Brazil, and Tunisia. Over half of the donations through voluntary agencies went to Asia. India was the largest single country recipient.

Barter for strategic materials.—Shipments under barter contracts involving procurement of strategic materials for stockpiling amounted to \$47 million in 1963, when the emphasis in the barter program was placed on overseas procurement for U.S. agencies. The total has declined steadily since that time, reaching \$6 million in 1967/68 and only \$1 million in 1968/69. Shipments in 1967/68 and 1968/69 consisted of relatively small quantities of cotton and tobacco. All shipments in 1967/68 and 1968/69 were under contracts signed during prior periods.

Area Review

Europe.--U.S. agricultural exports to Europe amounted to \$2,195 million in 1967/68, \$226 million less than a year earlier and the lowest total since 1962/63. The reduction from 1967/68 accounted for nearly four-fifths of the nearly \$300 million loss in commercial exports. The largest commodity reductions to the area were in corn, cotton, grain sorghums, wheat, and barley. Europe took more U.S. oil cake and meal, soybeans, and rice than a year earlier. Shipments of flaxseed nearly doubled.

U.S. exports of feed grains to Europe were affected by the large volume of low-quality wheat fed to livestock and by the use of cheaper substitutes for feed grains, especially for imported grains subject to variable levies. Import saving measures aimed at correcting the unfavorable trade balance helped reduce U.S. exports to the United Kingdom to \$329 million, the lowest total since 1953/54. Europe included seven of the 10 leading dollar markets for U.S. farm products (tables 12 through 16).

Asia. --Movement to Asia of U.S. farm products came to \$2,102 million in 1968/69, nearly \$400 million less than a year earlier. About two-thirds of the decline was in Food-for-Peace exports. Program shipments to India, Pakistan, and South Vietnam dropped \$443 million. Food-aid exports to the Republic of Korea, Indonesia, Israel, and Ceylon were sizably higher.

Japan was the top dollar market for U.S. farm products for the sixth consecutive year, taking \$839 million, compared with \$898 million in 1967/68. The greatest reductions in shipments to Japan were in cotton, wheat, and grain sorghums. Japan worked down its cotton stocks during 1968/69 in anticipation of lower prices. In addition to the dock strike, shipments of U.S. wheat were cut off for about 2 months because of a quality problem involving some shipments from the Pacific Northwest. The United States is facing increased competition in Japanese markets for some commodities, as Japan is pursuing a policy of greater diversification of sources for agricultural imports as part of its aid program to developing countries. The liberalization of pork imports by Japan, because supply was lagging behind increasing demand and prices were high, brought Japanese imports of U.S. fresh and frozen pork to \$22 million from less than \$1 million in 1967/68.

U.S. exports of wheat grain to Asia were 40 percent less than a year earlier. Cotton exports fell off 25 percent and grain sorghums 30 percent. Shipments of corn, wheat flour, tobacco, soybeans, and oil cake and meal were higher. Asia included seven of the major destinations for Food-for-Peace exports in 1967/68. India continued as the leading recipient of food-aid, while the Republic of China was in tenth place as a dollar market and in ninth place as a recipient of food-aid.

North America. -- U.S. exports of agricultural commodities to North America, almost entirely to Canada, rose \$100 million to \$643 million in 1968/69 from last year's total. However, about 70 percent of the gain was in larger transshipments of corn

1/ Authorized by Title I, P.L. 480.

2/ Shipments under dollar credit sales agreements signed through Dec. 31, 1966, authorized by Title IV, P.L. 480. Shipments under dollar credit and convertible foreign currency credit sales agreements signed from Jan. 1, 1967, authorized by Title II, P.L. 480, as amended by P.L. 89-808.

3/ Authorized by Title III, P.L. 480, and other legislation.

4/ Authorized by Sec. 303, Title III, P.L. 480, and other legislation.

5/ Includes expenditures under commodity (non-project) programs, project programs, and economic development loans, authorized by P.L. 87-195. Includes Jully-Docember 1968 only because of s delay in the preparation of the report for January-June 1969.

οĘ 6/ "Total agricultural exports outside specified Government programs" (sales for dollars) include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies; (2) extension credit and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash.

Net adjustment from a previous period.

8/ The apparent excess of Government-financed exports over total exports may be due to lags in reporting, differences in valuation procedures, or the recording of the export as destined for the country through which transshipment was made.

9/ Donations through the United Nations Relief and Works Agency (UNRWA) for the relief of Palestine refugees.

Authorized by Title I, P.L. 480.

Shipments under dollar credit and convertible foreign currency credit sales agreements signed from Jan. 1, 1967, authorized by Title I, P.L. 480, as amended by P.L. 89-808. Shipments under dollar credit sales agreements signed through Dec. 31, 1966, authorized by Title IV, P.L. 480.

of credit and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies; (2) extension 3/ Authorized by Title II, P.L. 480, as amended by P.L. 89-808.

4/ Authorized by Sec. 303, Title III, P.L. 480, and other legislation.

5/ Includes expenditures under commodity (non-project) programs, project programs, and economic development loans, authorized by P.L. 87-195.

6/ "Total agricultural exports outside specified Government programs" (sales for dollars) include, in addition to unassisted commercial transactions,

payments in cash.

and soybeans through Canadian ports on the St. Lawrence. Canada took \$20 million more of U.S. fresh or frozen pork due to short supplies. Shipments of fruits and preparations were higher, but exports of vegetables and preparations fell 10 percent, with most of the decline in fresh vegetables. Canada was second as a dollar market, including transshipments of \$149 million through Canadian ports.

Latin America.—Movement of U.S. farm products to Latin America in 1968/69 amounted to \$562 million, \$24 million less than a year earlier. Over 70 percent of the drop was in commercial exports, particularly to Brazil and Peru. Shipments to Mexico and Venezuela, the prime dollar markets in the area, were higher. Food-for-Peace exports to Brazil were considerably less than a year ago, but they were sizably larger to Chile and Colombia. Latin America took considerably less wheat and somewhat less corn in 1968/69, but more rice, cotton, tobacco, and soybeans than a year earlier. Brazil was in fifth place as a destination for food-aid shipments.

Africa. -- A drop of \$28 million, mostly in food-aid shipments, brought U.S. exports of farm products to Africa to \$191 million. The largest drops in Food-for-Peace exports were to Morocco, Tunisia, and the Congo (Kinshasa). Nigeria received \$14 million in food aid, mostly donations, up from \$2 million in 1967/68. Africa took less wheat, feed grains, rice, cotton, and tobacco from the United States than a year earlier. Tunisia was in tenth place as a recipient of Food-for-Peace shipments.

Oceania. -- The outflow of agricultural commodities from the United States to Oceania amounted to \$47 million, 2 percent higher than in 1967/68. Most of the small increase was in tobacco to Australia. Food-aid shipments consisted of donations through voluntary relief agencies to the British Western Pacific Islands.

ITALIAN CORN IMPORTS; A STATISTICAL CORRECTION AND ITS TREND IMPLICATIONS/

by Hans G./Hirsch <u>1</u>/

This article documents a major upward revision for Italian corn imports in 1967 and analyzes the trend effect of this revision as well as its effect on Italian and EC feed grain, agricultural, and total imports.

On July 1, 1967, a generally unified Common Agricultural Policy on grains became effective throughout the European Community. $\underline{2}/$ Variable levies on grain imports from third countries were generally made uniform throughout the Community and levies within the Community, i.e., against member countries, were abolished. There was one important exception: For a period of 5 years, Italy was permitted to reduce the variable levy on seaborne imports of feed grains by \$7.50 a metric ton and on \underline{all} feed grain imports by an additional \$3.13 during 1967/68; the additional levy discount amounts to \$2.50 during 1968/69 and 1969/70 and will expire on July 31, 1970. $\underline{3}/$

As of July 1, 1967, the administrative details for these levy discounts had not been worked out. Complications arose because these details had to include a distinction between the \$7.50 a ton discount and the additional \$3.13 discount and, in case of the latter, provisions for a compensatory charge on Italian feed grain shipments to other member countries, and for the subsidization of feed grain shipments from other member countries to Italy. Consequently, beginning July 1, 1967, much corn was actually brought into Italy under a suspended levy ("dazio sospeso") procedure, without formal importation (entry or liquidation) in the legal sense.

Thus, provisional and grossly incomplete corn import data for 1967 were published in the December 1967 issue of the Istituto Centrale di Statistica's (ISTAT) Statistica Mensile del Commercio con l' Estero and in the March 1968 issue of ISTAT's Bollettino Mensile di Statistica. These incomplete data were incorporated into the standard compilations for 1967 of international organizations and also into a 7-year time series of the Economic Research Service. 4/

Organization for Economic Cooperation and Development. Commodity Trade: Imports Series C, Jan.-Dec. 1967. Paris, August 1968.

Statistical Office of the European Communities, Foreign Trade. Analytical Tables. Jan.-Dec. 1967, Vol. A, pp. 66-67. (Continued on next page.)

At the time of publication of the provisional figures, the question was left open how, i.e. for what period, corn actually brought into Italy under the suspended levy procedure during 1967 would ultimately be reported. Such corn might be reported as having been imported in 1968, in conformity with the concept that import statistics reflect legal importation (formal entry or liquidation) or it might be reported as having been imported in 1967, in deference to its actual importation during that year.

It was not until the very end of 1968 and early 1969 that revised or complete corn import data were published by ISTAT, first in Statistica Annuale del Commercio con 1' Estero 1967, Volume 2, later in Volume 1 of that yearbook, and still later in the December 1968 issue of Statistica Mensile del Commercio con 1' Estero and in the March 1969 issue of Bollettino Mensile di Statistica.

Revised data for Italian and European Community imports of corn, feed grains, agricultural products, and all products are shown in table 17. For the reader's convenience, the additions to earlier data are also shown.

The approximate addition to corn imports is \$115 million in value and 1.9 million metric tons in quantity. These additions equal 51.9 percent of the originally published Italian value figure and 54.7 percent of the corresponding quantity figure.

For the European Community, the additions raise the value of corn imports by 17.8 percent and their quantity by 18.9 percent.

In contrast to corn import figures, import figures for barley, oats, rye, and "other grains" (i.e., other than those mentioned and wheat) were not revised even though all feed grain imports have enjoyed the variable-levy discount, and these small feed grains could be brought into Italy under the suspended levy procedure. Apparently this was not done. Imports of small feed grains in 1967 were less than in 1966 and 1968 (table 18); but they were about the same as arrivals by sea, as reported by Sorveglianza, a private statistical reporting firm. Thus, the addition to earlier data on all feed grain imports is the same as the addition to earlier data on corn imports. While corn is the preponderant feed grain imported into Italy, imports of other feed grains ranged from about 1 to 1-1/3 million tons a year during 1965-68.

Revision of the Italian corn import data raises the value of all feed grain imports by 39.3 percent over the originally published data and the quantity of such imports by 41.8 percent. For the European Community as a whole, the revision means a 10.3-percent increase in the value of feed grain imports and an 11.4-percent increase in their quantity.

Agricultural imports, as defined in publications of the Economic Research Service and, in particular in "European Economic Community, Agricultural Trade Statistics, 1961-67," ERS-Foreign 247, February 1969, are valued \$2,626,419,000 for Italy in 1967 in an OECD computer printout on file with the Economic Research Service. The revision of corn imports increases that amount by 4.4 percent. For the European Community the increase amounts to 0.9 percent.

3/ Sum of (1) corn, (2) rye, barley, and oats, and (3) other grains.

6/ Difference between revised data and data shown in ISTAT. Statistica Mensile del Commercio con l' Estero, Dec. 1967, pp. 4 and 8. Values converted from million lire by factor 1.6.

7/ Difference between revised figure and OECD computer printout.

When the Italian Central Statistical Institute issued final figures for 1967 imports, data for several other import categories were also revised but to a much lesser extent than corn imports. These other changes — most important a \$16.8 million increase in imports of manufactured products — raised the upward adjustment for all Italian imports to \$129.6 million, or 1.3 percent of the original figure, and for all European Community imports that increase equaled 0.2 percent.

The bulk of the upward adjustment in corn import data pertained to imports from the three principal countries of origin -- Argentina, the United States, and Brazil (table19). For Argentina, the upward adjustment amounted to 42 percent in value and to 43 percent in quantity, for the United States to 92 and 102 percent, respectively, and for Brazil to 147 percent in value and 152 percent in quantity. The adjusted share for the United States in the quantity of total corn imports is 24 percent. Western Hemisphere countries supplied 4.3 million tons of corn valued \$273 million.

^{2/} Istituto Centrale di Statistica (ISTAT). Statistica Annuale del Commercio con l' Estero, 1967, vol. 1, Rome 1968, pp. 4 and 8; also ISTAT. Bollettino Mensile di Statistica, March 1969, p. 50. Values converted from 1,000 lire by factor 0.0016.

 $[\]frac{4}{}$ OECD computer printout of sum of imports of agricultural commodities plus \$115,054,000. "Agricultual products" as shown in ERS-Foreign 247, op. cit. in footnote 4, tables 1 and 2, plus \$115,054,000.

^{5/} Statistical Office of the European Communities. Foreign Trade, Monthly Statistics, 1969, No. 7, pp. 12 and 44. Inconsistent with the revised larger figure, unrevised smaller data for the EEC and for Italy are shown on p. 60 of the same publication. In our table, we show the difference between these two data. The same EC periodical in 1968, No. 3, pp. 18 and 46, originally showed EC imports of all products of \$54,927,724,000 or \$140,376,000 less than the revised figure.

Sources: Revised data: ISTAT, Statistica Annuale del Commercio con l'Estero, 1967, vol. 1, Rome, Dec. 1968. Earlier data (subtrahends from which additions were obtained): ISTAT, Statistica Mensile del Commercio con l'Estero, Dec. 1967, Rome, March 8, 1968.

This was 81 percent of both the total value and the total quantity of corn imports. The unit value of all corn imports was \$64.24 a metric ton, with that of Argentine corn higher (\$65.26) and that of U.S. corn lower (\$62.95).

The revision smoothes the time series of corn imports but it imparts fluctuation and a changed peak to the time series of agricultural imports (table 20). Corn imports reached a peak of \$356 million and 5.4 million tons in $\underline{1966}$, with 1965 and revised 1967 values and quantities only slightly less. Imports during that 3-year period represented

a plateau with annual averages of \$343 million and 5.27 million tons. Imports in 1968 were 7 percent below that plateau in quantity and 17 percent down in value. Agricultural imports, on the other hand, reached their peak of \$2.74 billion in 1967 and declined by a more moderate 3 percent in 1968. Agricultural imports in 1968 were the second highest.

To present the timeliest picture, corn imports are also shown for years ending June 30 (table 21). Here a peak of 5.47 million tons was reached during July 1965-June 1966. A relatively sharp drop to 5.00 million tons occurred the following year. Relative stability prevailed during 1966/67-1968/69, when corn imports averaged 4.94 million tons. However, two successive declines in the unit value of corn imports from \$66 a ton during 1965/66-1966/67 to \$62 and \$58 reduced the value of corn imports much more than the quantity. Moreover, the value continued to decline when the quantity stabilized. With a large corn crop being harvested in Italy at this writing there is little prospect for any trend reversal.

U.S. AGRICULTURAL EXPORTS AS SHARE OF PRODUCTION

U.S. exports of agricultural commodities in fiscal year 1969, at \$5.7 billion, were equivalent to 13 percent of the \$44.4 billion of cash receipts from farm marketings in 1968. Animals and animal products, accounting for 57 percent of cash receipts, accounted for only 13 percent of total farm exports. But crops, with 43 percent of cash receipts, accounted for 87 percent of our farm exports. Animal product exports in 1968/69 accounted for nearly 3 percent of cash receipts from these products, while exports of crop products accounted for over 26 percent of cash receipts from farm crops (table 22).

Dry edible peas replaced wheat in 1964/65 to become the leading U.S. farm commodity in percentage of production exported. They have continued to lead the field every year since, reaching a new high in 1968/69, when exports required 84 percent of total U.S. production of dry edible peas. In 1963/64, these exports were 50 percent of production, ranking fifth below wheat, nonfat dry milk, rice, and hides and skins.

Rice exports as a share of production peaked at 67 percent in 1966/67 and declined in 1968/69 to 59 percent -- same as the 1963-65 average. Crops showing an increase since 1963-65 in the share of production exported include tobacco, flaxseed, raisins, dried prunes, lemons, and limes. Corn remained the same, while the share of wheat production exported declined significantly to 34 percent from 62 percent. The share of production exported declined moderately for soybeans, hops, cotton, and dry edible beans. Sharp decreases occurred for grain sorghums, rye, and barley.

Of the animal products, only hides and skins showed a substantial increase in the share of production exported. Tallow, variety meats, and dry whole milk were about the same, while lard and nonfat dry milk declined sharply from the 1963-65 level.

The export market is particularly important for a number of commodities (table 23). In 1968/69, five-sixths of the production of dry edible peas and three-fifths of the rice were marketed overseas. Two-fifths of the soybeans, tobacco, cattle hides, tallow, and hops were exported. Wheat and flaxseed exports were more than one-third of domestic production. Exports of dried prunes, raisins, cotton, nonfat dry milk, and dry whole milk accounted for one-fourth of production.

Cotton exports were 26 percent of production in 1968/69, compared with 55 percent a year earlier. While production increased 47 percent, exports declined 31 percent. Exports of wheat accounted for 34 percent of production in 1968/69, down sharply from 49 percent the previous year. Wheat production increased 3 percent while exports fell 29 percent. Although raisin exports increased 2 percent in 1968/69, a 45-percent gain in production brought the export share down to 27 percent in 1968/69 from 38 percent the year before. The export shares of grain sorghums, rye, and barley were significantly lower in 1968/69 as exports fell sharply while production remained relatively stable.

In 1968/69, exports of dry whole milk were 23 percent of production, up from 16 percent a year earlier. Production increased 27 percent while exports increased 82 percent. Exports of nonfat dry milk were 25 percent of production in 1968/69, compared with 20 percent the previous year. Production declined 4 percent while exports increased 21 percent during the year.

U.S. AGRICULTURAL EXPORTS TO 50 LARGEST MARKETS, FISCAL YEARS 1964-69

During 1968/69, the United States exported farm commodities to over 150 countries, but 15 countries received nearly three-fourths of the total (table 25).

Shipments of farm products the past several years have shown the greatest increase to such markets as Japan and the major industrial countries of Western Europe. Since 1963/64, agricultural exports to Japan have averaged \$847 million, and reached a high of \$939 million in 1966/67. In 1968/69, value of U.S. agricultural exports to Japan was \$839 million. A substantial increase occurred in exports to the European Community during some of this same period, despite the variable levies imposed by the EC Commission. However, the continued rise in agricultural production encouraged by Common Market's agricultural policy has hampered our exports. Total agricultural exports to the EC have declined since 1965/66, totaling \$1.3 billion in 1968/69. The Republic of Korea increased from 13th place in 1966/67 to eighth place in 1967/68 and to sixth place in 1968/69.

India and Pakistan showed similar increases in receipts of U.S. agricultural exports, though they were primarily recipients of Government program shipments. The sharp increase in production of wheat and rice in these countries in 1967/68 sharply reduced their import requirements last season.

Although table 26 shows Canada as the second largest market for U.S. agricultural exports, U.S. exports to Canada include grain and soybeans moving through the St. Lawrence Seaway for storage at lower St. Lawrence River terminals and later movement overseas, primarily to Western Europe. In 1968/69, these transshipments totaled an estimated \$149 million (table 26).

Rotterdam, Netherlands, is also a major transshipping port for U.S. products that eventually enter Western Europe's markets. In 1968/69, U.S. agricultural commodities transshipped through the Netherlands reached an estimated value of \$164 million, with corn and soybeans accounting for nearly three-fourths of this total (table 27). West German receipts of commodities transshipped through the Netherlands totaled \$86 million; the United Kingdom's share was \$41 million. Together, they received 77 percent of the agricultural transshipments through the Netherlands.

Antwerp, Belgium, and Hamburg, Germany, are other transshipment points for many agricultural commodities. Although Belgium and Germany have ports through which U.S. agricultural products are transshipped, they also receive products transshipped from the Netherlands and Canada.

^{1/}Because of transshipments, the value of U.S. exports is overstated to such countries as Canada, Netherlands, and Belgium, and understated to such countries as West Germany, United Kindgom, Switzerland, Ireland, Italy, Denmark, Sweden, Norway, and others. For details of transshipments through Canada and Netherlands, see tables 26 and 27.2/Less than \$500. 3/ Not available by countries. 4/ July-December only. Not separately classified beginning Jan. 1, 1966. 5/ Effective Jan. 1, 1964, includes the former Federation of Malaya and the State of Singapore. 6/ New classification effective Jan. 1, 1964. 7/ July-December only. 8/ Beginning Jan. 1, 1966, separately classified as Singpore. 2/ Separately classified beginning Jan. 1, 1967, formerly included in the Republic of South Africa.

^{1/} Because of transhipments, the value of U.S. exports is overstated to such countries as Canada, Netherlands, and Belgium, and understated to such countries as West Germany, United Kingdom, Switzerland, Ireland, Italy, Denmark, Sweden, Norway, and

others. For details of transshipments through Canada and Netherlands, see tables 26 and 27.

2/ Includes food exported for relief or charity by individuals and private agencies.

3/ Feed grains: Barley, corn, oats, and grain sorghums, excluding products.

4/ Excludes essential oils which are included in "other".

5/ Other commodities: Mainly feeds and fodders, seeds, except oilseeds, coffee, hops, essential oils, sugar and related products, and live animals. Continued--

the Netherlands (sources: Central Bureau of Statistics, The Hague, Trade by Commodity; and U.S. Bureau of the Census, FT 410). Transshipments by country of destination were based on monthly reports from the Netherlands Central Bureau of Statistics, Total transshipments are assumed to be the difference between Netherlands imports from the United States and U.S. exports to Transit Trade with Transshipment by Commodities. Note:

SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

Wheat prices continued to sag in September. The buyer's price of U.S. No. 1 Hard Winter wheat, ordinary protein, f.o.b. Gulf ports, declined to \$1.50 a bushel, 2 percent below August (table 28). Beginning in mid-September, export payments were made to sellers for the first time since early 1968. They averaged 7.5 cents a bushel for the last 2 weeks of September. Since sellers still had to purchase export certificates during the first 2 weeks of September, the average seller's price for the entire month exceeded the buyer's price by only 1.5 cents a bushel; at \$1.51 it was 8 cents (5.6 percent) above August and 1 cent above a year earlier. By contrast, the buyer's price was 24 cents below a year earlier. At that time, sellers had to pay 24 cents a bushel for export certificates.

Other wheat prices also declined from August to September. The Canadian export price was down 2 cents or 1 percent from August and 17 cents or 8.5 percent from a year earlier. The c.i.f. U.K. quotation of U.S. No. 2 Hard Winter wheat declined by only 0.3 percent and did not yet reflect the lower level of the buyer's price f.o.b. Gulf ports. As a matter of fact, the c.i.f. price was 1 percent above a year earlier in contrast to the 14-percent drop in the f.o.b. Gulf port price during that period. The c.i.f. U.K. price of Manitoba No. 2 wheat was 0.7 percent below August and 5.3 percent below a year earlier.

Thus, the premium of Manitoba No. 2 wheat over U.S. No. 2 Hard Winter wheat in the United Kingdom was only \$2.46 a metric ton in September, compared with \$7.39 a year earlier. The unusually low premium tends to make Canadian wheat more attractive to buyers until the lowered f.o.b. Gulf port price to buyers will be felt overseas and restore more normal differentials.

Australian wheat, c.i.f. U.K., in September was quoted 1 percent below August and 3 percent below a year earlier. Its discount below U.S. No. 2 Hard Winter wheat was \$5.95 a metric ton, compared with only \$3.17 a year earlier, another differential unfavorable to the salability of U.S. No. 2 Hard Winter wheat. Argentine wheat continues unavailable, at least until the new crop season begins in December.

The price of Argentine corn, c.i.f. U.K., rose 3.6 percent in September and was 25.8 percent above a year earlier. This reflected scarcity of supply. The price of U.S. No. 3 yellow corn, on the other hand, declined 1.6 percent below August; it continued to be freely available during the last month of the old crop year. U.S. corn production for 1969 was estimated October 1 at 4,350 million bushels, 25 million bushels or 0.6 percent less than in 1968. The Argentine sorghum grain price, c.i.f. U.K, rose sharply to \$65.16 a metric ton, a 7-percent increase over August. The quoted sorghum grain price exceeds the U.S. No. 3 yellow corn price by \$3.74 a metric ton. This makes corn a much better buy.

The export price of Thai rice was 1 percent below August and 3 percent below a year earlier, reflecting good prospects for the 1969 crop (to be harvested in November and December) in both Thailand and Burma. The price of soybeans, c.i.f. U.K., gained 0.8 percent but was 4.6 percent below a year earlier. The demand for soybeans and soybean products is strong; at the same time supplies are plentiful.

3/ Nominal, September-October 1968.

Source: Monthly Bulletin of Agricultural Economics and Statistics, FAO; The Public Ledger, London: Grain Market News, USDA, C&MS; Bangkok Board of Trade; and Cotton and General Economic Review, Liverpool.

The price of cotton, Memphis Territory, strict middling, 1-1/16 inches, c.i.f. Liverpool, continued at 28.25 cents a pound, unchanged from August but 17 percent below the nominal September 1968 quotation. In October, the estimate of U.S. cotton production in 1969 was reduced to 10,528,000 bales, 560,000 bales less than the previous estimate for 1969 and 420,000 bales less than 1968 production.

Export Highlights

U.S. AGRICULTURAL EXPORTS, JULY-SEPTEMBER 1969

U.S. agricultural exports in the first 3 months of fiscal 1970 totaled \$1,410 million slightly below a year earlier (table 29). The decline resulted primarily from the lower export value of cotton, oilseeds and products, and tobacco. The export value of animals and animal products, fruits and preparations, and grains and preparations increased. Agriculture's share of total U.S. exports during July-September was about 15 percent, down from 17 percent in 1968/69. While total agricultural exports fell 1 percent from last year, exports of nonagricultural products rose 12 percent, resulting in a 10-percent increase in total U.S. exports for July-September.

The export value in September improved for animals and animal products, fruits, and vegetables, and grains and preparations, compared with a year earlier. A substantial rise in corn shipments boosted the total for grains and preparations to \$86 million, from \$59 million in September 1968. This resulted in a rise for the total export value for feed grains of 22 percent above September 1968 even though values of oats, barley, and sorghums were down. Exports of wheat and wheat flour rose to \$60 million in September 1969, up 14 percent.

Animals and animal products totaled \$178 million in July-September, 3 percent above a year earlier. Most animal and animal product commodity groups moved at a higher rate. There were substantially larger movements of hides and skins; fats, oils, and greases; and meats and meat products. Hides and skins -- notably cattle hides -- gained 26 percent above the export value in July-September 1968/69. Larger shipments of variety meats added much of the increased exports to meats and meat preparations, along with some increase in fresh pork, beef, and veal. Lard exports totaled \$5 million, up substantially from July-September 1968/69. Inedible tallow exports also increased. Dairy products were the exception. Nonfat dry milk and anhydrous milk fat accounted for most of the decline in dairy products. Shipments of anhydrous milk fat, which totaled nearly \$2.4 million a year ago, were nil this July-September.

Cotton exports totaled \$70 million, down 29 percent from a year earlier. Quantity was down even more, dropping 32 percent to 566,000 bales. The higher per-unit value in July-September reflected the larger export volume of cotton over 1-1/8 inches. In July-September 1969, this class was valued at \$14 million, compared with \$2.5 million in same months of 1968. At the same time, lower-priced cotton (under 1 inch) declined sharply, falling to \$18 million in July-September 1969, compared with \$51 million during last year's July-September period.

Shipments of U.S. fruits and vegetables were up 18 percent in July-September, primarily due to a substantial rise in exports of fruits and preparations. Fruit and preparation exports in July-September totaled \$101 million, 25 percent above a year earlier. Most

^{1/} Preliminary.

of this increase reflected larger shipments of fresh fruits, notably oranges, tangerines, and clementines. In addition, exports of canned and dried fruit increased. The value of fruit juice exports was slightly below a year earlier. Exports of vegetables and preparations were slightly higher, totaling \$37 million. Although shipments of fresh and canned vegetables were about the same, an increase in dried peas resulted in a total export value above last year's July-September level.

Feed grains and rice have paced the higher export value of grains and preparations thus far in 1969/70. Feed grain exports were 15 percent above the \$241 million exported in July-September 1968, because of substantially larger shipments of corn. Shipments of oats, barley, and sorghums declined. Rice export value was up 24 percent in July-September. Exports of wheat and wheat flour totaled \$203 million, down 9 percent.

U.S. exports of oilseeds and products dropped 7 percent to \$224 million in July-September, primarily from lower shipments of soybeans. Protein meal, totaling 739,000 short tons and valued at \$61 million, was 3 percent higher than in July-September 1968. Soybeans, valued at \$118 million, fell 12 percent from the corresponding months of last fiscal year. In addition, flaxseed exports were down sharply to \$4 million. Shipments of cottonseed and soybean oil were up about 12 percent because shipments of cottonseed oil increased to nearly \$5 million, compared with \$1.6 million in July-September 1968.

U.S. shipments of tobacco were down 13 percent to \$134 million. Flue-cured tobacco dropped to \$109 million, compared with \$119 million a year earlier. Exports of burley tobacco were down 12 percent to \$14 million.

U.S. Agricultural Exports to the EC, July-September 1969

Exports of farm products to the European Community totaled \$282 million in July-September, 16 percent lower than those of the corresponding months in 1968 (table 30). Sales of variable-levy commodities dropped 21 percent to \$113 million, while commodities not subject to the EC's variable import levies declined 12 percent to \$168 million.

Of the U.S. products subject to the EC's variable import levies, feed grains continued to account for the largest portion of the decline. Exports of corn, totaling \$76 million for July-September, were down 13 percent, and contributed to most of the decline in feed grains. The decline in wheat grain further contributed to the overall reduction in exports of variable-levy commodities, dropping 53 percent to \$12 million. However, shipments of corn byproducts for feed, rice, and pork rose. Rice exports increased substantially, by 35 percent over a year earlier to \$8.5 million. Exports of pork, which in recent years have declined, were also up. Both pork and lard showed substantial increase, although the rise was from a relatively small base. Exports of poultry and eggs edged above the July-September 1968 level. Smaller shipments of live poultry, broilers, fryers, and stewing chickens were offset by larger sales of turkeys and eggs.

Non-variable levy commodities declined to \$168 million, primarily because of smaller soybean, cotton, tallow, tobacco, and vegetable exports. Soybeans showed the sharpest decline, falling 22 percent to \$27 million in July-September. Cotton exports totaled \$3.9 million, compared with \$8.8 million in the same months of 1968. Exports of tallow declined by \$2.6 million to only \$2.8 million. Increased exports of fruits and preparations rose 50 percent to \$22 million. Among the fresh fruit exports, oranges and tangerines rose sharply. Variety meat exports were up about 10 percent, to \$8.2 million.

^{1/} Grains, poultry, and porkwere subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. The variable-levy classification is designed to show overall changes in exports rather than to measure the impact of the variable levies. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT. 4/ Variable levy on sugar-added content only. Compiled from U.S. Bureau of Census data.

Import Highlights

U.S. AGRICULTURAL IMPORTS, JULY-SEPTEMBER 1969

For September 1969, U.S. agricultural imports amounted to \$399 million, bringing the cumulative fiscal year total to \$1,241 million. In comparison, such imports were \$460 million for September 1968 and \$1,341 million during July-September last year.

Relatively larger inventories of some commodities this year accounted for part of the reduction in imports. Imports of supplementary (competitive or partly competitive) commodities were about 1 percent lower than a year ago, reflecting declines in many animal and crop products (table 31). Meat imports showed gains, however, as demand for beef and pork in the United States this year has risen faster than domestic production.

Complementary or noncompetitive imports during July-September amounted to \$449 million, about 17 percent lower than last year's level. Sharply lower purchases of coffee accounted for much of the decline, coupled with lesser declines for bananas, tea, drugs, and essential oils. Somewhat offsetting were gains for rubber, cocoa beans, soluble coffee, and spices. September imports of complementary agricultural products were \$151 million, compared with \$184 million in September 1968.

Imports of nonagricultural products during the July-September quarter rose 13 percent to nearly \$7.9 billion from slightly less than \$7.0 billion in the same months last year (table 32).

^{1/} Based on 332 classifications.
2/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. The previous adjustments were based on the seasonal factors developed from the base period 1957-59. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 variant of the seasonal Method II seasonal adjustment program, Technical Paper No. 15. U.S. Government Printing Office, Washington D.C., 1965.

^{1/} Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all other, about 98 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and vegetable fibers. 2/ Based on 417 classifications.

3/ The seasonal adjustment series has been revised to incorporate the Bureau of Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. The previous adjustments were based on the seasonal factors developed from the base period 1957-59. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of Census, The X-11 variant of the seasonal Method II seasonal adjustment program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C. 1965.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$100 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural exports statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued \$100-\$499 are included on the basis of sampling estimates; shipments to Canada valued \$100-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. The agricultural statistics exclude low-value shipments from countries not identified because of illegible reporting, but they are reflected in nonagricultural and overall import totals in this report.

The <u>import value</u>, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The <u>country of origin</u> is defined as the country where the commodities were grown or processed. Where the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary, or partly competitive. All other commodities are complementary, or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
